Aims and Scope

The **Journal of FisheriesSciences.com** publishes peer-reviewed articles that cover all aspects of fisheries sciences, including fishing technology, fisheries management, sea foods, aquatic (both freshwater and marine) systems, aquacultural systems and health management, aquatic food resources from freshwater, brackish and marine environments and their boundaries, including the impact of human activities on these systems. As the specified areas inevitably impinge on and interrelate with each other, the approach of the journal is multidisciplinary, and authors are encouraged to emphasise the relevance of their own work to that of other disciplines.

This journal published articles in English or Turkish (**free access**).
